I2GRE Encapsulate

Overview:

When a packet is encapsulated with an I2GRE header the new I2GRE header segments are added to the original packet. The I2GRE header segments consist of Ethernet II, IPv4, and I2GRE as shown below.

Encapsulating a packet with an I2GRE header involves two configuration processes.

1. Create a Flow
2. Create a Tap Group
1. **Create a Flow**

The flow defines which packets will be encapsulated with an l2GRE header. Packets that do not meet the flow attributes will not be encapsulated. In some cases, it may be required to create more than 1 flow.

1. Select Tap Management.
2. Select Flow.

The Add Flow panel will appear.

4. Enter the Flow Name.
5. Select Add Flow.

The flow will be displayed.

6. Select the + in the Options column for the desired flow to define the flow attributes.
The Add Flow Entry panel will be displayed.

7. Under Match Rule select the desired options and enter the desired values to define which packets are encapsulated with a l2GRE header. If desired the default options may be used to encapsulate all packets.

8. Under Action, select Add l2gre.

9. Enter the desired L2gre-src-ip. This defines the Source IP in the IPv4 segment of the l2GRE header.

10. Enter the desired L2gre-dest-ip. This defines the Destination IP in the IPv4 segment of the l2GRE header.

11. Enter the desired L2gre-dst-mac. This defines the Destination MAC in the Ethernet II segment of the l2GRE header.

12. Select the L2gre-key-length, 16, 20, 24, 32. The default is 24.

13. Enter the L2gre-key-num, 1-16777215.

14. Select OK.
2. Create a Tap Group

The Tap Group defines the ingress port, ingress flow and egress port.

1. Select Tap Management.
2. Select TAP Group Table.
3. Select + Add TAP Group.

   The TAP Group Name panel will appear.

   ![TAP Group Name Panel]

4. Enter the TAP Group Name.
5. Select OK.
The Tap Group will be displayed.

6. Place the cursor on the tap group name under the TAP Group Name column and press the left mouse button.
   
The TAP group panel will appear.

7. Select the + Add to define the ingress port and ingress flow.
   
The add panel will appear.

8. Select the Direction, ingress.
9. Select the desired ingress port.
11. Select the l2GRE flow.
12. Select OK.
13. Select the + Add to define the egress port.
   The add panel will appear.

15. Select the desired egress port.
16. Select OK.

17. The ingress port, ingress flow, and egress port may be displayed by selecting Ingress or Egress. Additional ingress ports, ingress flows, or egress ports may be added to the Tap Group using the same steps.
18. Select Close to return the TAP Group Table display.
I2GRE Decapsulate

Overview:
When an I2GRE packet is decapsulated the I2GRE header segments are removed from the packet.

Decapsulating the I2GRE header from a packet involves two configuration processes.
1. Create a Flow
2. Create a Tap Group
1. Create a Flow

The flow defines which l2GRE packets will be decapsulated. Packets that do not meet the flow attributes will not be decapsulated. In some cases, it may be required to create more than 1 flow.

1. Select Tap Management.
2. Select Flow.

   The Add Flow panel will appear.

4. Enter the Flow Name.
5. Select Add Flow.

   The flow will be displayed.

6. Select the + in the Options column for the desired flow to define the flow attributes.
The Add Flow Entry panel will be displayed.

8. Select the other desired options and enter the desired values to define which l2GRE packets are decapsulated. The defaults may be used to decapsulate all l2GRE packets.

10. Select OK.
2. Create a Tap Group

The Tap Group defines the ingress port, ingress flow, and egress port.

1. Select Tap Management.
2. Select TAP Group Table.
3. Select + Add TAP Group.

The TAP Group Name panel will appear.

4. Enter the TAP Group Name.
5. Select OK.

The Tap Group will be displayed.
6. Place the cursor on the tap group name under the TAP Group Name column and press the left mouse button.

   The TAP group panel will appear.

7. Select the + Add to define the ingress port and ingress flow.

   The add panel will appear.

8. Select the Direction, ingress.

9. Select the desired ingress port.

11. Select the l2GRE flow.

12. Select OK.
13. Select the + Add to define the egress port.

   The add panel will appear.

15. Select the desired egress port.

16. Select OK.

17. The ingress port, ingress flow and egress port may be displayed by selecting Ingress or Egress. Additional ingress ports, ingress flows or egress ports may be added to the Tap Group using the same steps.

18. Select Close to return the the TAP Group Table display.
