

The following procedure may be used to configure SNMPv3 on the Advanced Aggregators. The Advanced Aggregators support two versions of SNMPv3, MD5/DES or SHA/AES. SNMPv3 may be set up via the GUI or via CLI commands. This procedure focuses on the CLI command method.

Connect to the Advanced Features

Connect to the Advanced Features unit. A connection to the unit may be established using two options:

- Directly connected to the Console Interface to COM Port using Putty/Serial connection.
- Connected via the IP Management Interface using Putty/SSH connection.

1. Press the Return key.
2. Enter enable.
3. Enter configure terminal.

Configuring SNMPv3 MD5 / DES

1. Enter the following commands.

```
Switch(config)# snmp-server enable  
Switch(config)# snmp-server trap enable all  
Switch(config)# snmp-server community public read-only
```

*The Community String **public** may be substituted with another desired option.*

***read-only** may be substituted with **read-write**.*

```
Switch(config)# snmp-server usm-user username authentication md5 md5password  
                  privacy des despassword
```

*Substitute **username** with the desired username defined on the MIB Browser.*

*Substitute **md5password** with the desired MD5 password defined on the MIB Browser.*

*Substitute **despassword** with the desired DES password defined on the MIB Browser.*

```
Switch(config)# snmp-server group grp1 user username security-model usm
```

*Substitute **username** with the desired username defined on the MIB Browser.*

```
Switch(config)# snmp-server access grp1 security-model usm priv
```

```
Switch(config)# snmp-server notify notify1 tag tempteg
```

```
Switch(config)# snmp-server target-params parm1 user username security-model v3  
                  message-processing v3 priv
```

Substitute **username** with the desired username defined on the MIB Browser.

```
Switch(config)# snmp-server target-address targ1 param parm1 mgmt-if
    xxx.xxx.xxx.xxx taglist tempteg
```

Substitute **xxx.xxx.xxx.xxx** with the desired MIB Browser IP Address.

Configuring SNMPv3 SHA / AES

- Enter the following commands.

```
Switch(config)# snmp-server enable
```

```
Switch(config)# snmp-server trap enable all
```

```
Switch(config)# snmp-server community public read-only
```

*The Community String **public** may be substituted with another desired option.*

***read-only** may be substituted with **read-write**.*

```
Switch(config)# snmp-server usm-user username authentication sha shapassword
    privacy aes aespASSWORD
```

*Substitute **username** with the desired username defined on the MIB Browser.*

*Substitute **shapassword** with the desired SHA password defined on the MIB Browser.*

*Substitute **aespASSWORD** with the desired AES password defined on the MIB Browser.*

```
Switch(config)# snmp-server group grp1 user username security-model usm
```

*Substitute **username** with the desired username defined on the MIB Browser.*

```
Switch(config)# snmp-server access grp1 security-model usm priv
```

```
Switch(config)# snmp-server notify notify1 tag tempteg
```

```
Switch(config)# snmp-server target-params parm1 user username security-model v3
    message-processing v3 priv
```

*Substitute **username** with the desired username defined on the MIB Browser.*

```
Switch(config)# snmp-server target-address targ1 param parm1 mgmt-if
    xxx.xxx.xxx.xxx taglist tempteg
```

*Substitute **xxx.xxx.xxx.xxx** with the desired MIB Browser IP Address.*
